IM2 - Interactive Multimodal Information Management

BET for TQB

Browser **E**valuation **T**est
Transcript-based **Q**uery and
Browsing Interface
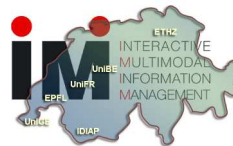

Welcome to the Browser Evaluation and Test experiment !

Thank you for accepting to be part of the BET. In this experiment, you will use a new device called a meeting browser, in order to answer questions about what happened in a meeting that you did not attend.

Please CLICK HERE to read the instructions of the TQB meeting browser prototype. Then, please CLICK HERE to check the audio signal of your RealPlayer.

The questions will appear as pairs of complementary statements about a fact related to the meeting. **Your goal is to find out which one is true** and (consequently) which one is false, by using TQB to explore the meeting. When you find the answer, check the box in front of the true statement, then press <u>Next</u> to see another pair of statements.

You will see **two meetings during this experiment.** For each of them, you have a **limited amount of time** to answer questions. The time left will be displayed for each question. The first meeting will give you the opportunity to learn how to use TQB, so that you answer correctly a maximum number of questions in the second meeting.

When you finish the time allowed for the first meeting, please consider taking a short break, then press <u>Next</u> to proceed to the second meeting. When you finish the second meeting, the BET experiment is over: thanks for getting there!

Please enter your email address (used only as a unique identifier, no email will be sent) and select your English level from the following menu, then press the button to start working on the first meeting.

Evaluation now deactivated. Please contact A. Popescu-belis or Philippe.Baudrion@adm.unige.ch - ETI.
